New Cut System Proposed

Joint Student-Faculty Does the Planning

And the plan to revolutionize the system of cuts was proposed by a joint-student-faculty committee to take effect September, 1960. The new approach is designed to make the traditional cut system more logical, and faculty at the present time are preparing a system, which will be voted on during the course of next week.

The main reason for this proposal is that the present cut system is not satisfactory to either the students or the faculty. The present system has been tried for years, and neither party is entirely satisfied with it. The students feel that they are not given enough freedom to choose the type of cut they desire, while the faculty feel that they are not given enough control over the selection of cuts to make it effective.

The committee responsible for this proposal consists of: John McDowell, chairman; Paul E. Elkins, representing the Faculty; and James S. Chamberlain, representing the Student Council. The committee has been working on the problem for several weeks and has come up with a plan that they believe is the best solution.

The new system will allow students to choose their own cuts, but the faculty will have the authority to approve or disapprove them. This will ensure that the cuts are appropriate for the individual student and will also ensure that they are not too extreme or too conservative.

The committee has also proposed that the cuts be changed on a regular basis, every two years, to keep up with the latest trends in fashion.

The plan is expected to be voted on next week and it is hoped that it will be accepted by both the students and the faculty.

Placing Offices Already at Work

An advance opportunity for students of Lowell Tech to be employed in the Off-Office of the Lowell Technical Institute has been arranged. The position is sponsored by the Student Council of the Lowell Institute of Technology.

The offices will be open in the mornings of each working day, and the students will be employed as typists, bookkeepers, and secretaries. They will be paid at a rate of $1.50 per hour.

The students will be required to have a good understanding of typing and bookkeeping, and they will be expected to work at least 20 hours per week.

The students interested in this opportunity should apply to the Student Council of the Lowell Institute of Technology.

多人认为，如果允许学生参加年度投票，将会增加学生对学校的归属感和参与感。然而，一些学生团体反对这一提议，他们认为学生投票可能会导致决策的不一致和效率低下。
Cheating In College

by Donald Cooper

In a recent issue of the School Board, a student article dealing with cheating on the college level. The author wrote an article designed to bring the topic to the forefront of student consciousness. The article was written to emphasize the serious nature of the problem.

This article was certainly an interesting one and really well written. It addressed the issue of cheating on a large scale and employed an array of methods and techniques to make its point at the present. The author has chosen some of the most effective winning speeches on specific topics.

Grande's article proved there is an unhealthy situation in the present college system. But, there was no mention of how much of a problem this situation has become. There is no mention of methods of cheating that are often employed.

In terms of content, Grande's article could be improved by adding more detail to the discussion of the problems presented. The author could also improve the article by providing more practical solutions for the problems discussed.

Without a doubt, the problems discussed are serious, and it is very likely that the majority of students in the system is aware of this situation. There are far more cases of cheating going on in the system than what is reported here. The author, Grande, could have been more specific in his discussion of the types of cheating that are going on.

The author could have also discussed the implications of cheating on the system. He could have discussed the impact of cheating on the system, the morality of cheating, and the future of the system.

In conclusion, Grande's article is a good start, but it could be improved by adding more detail and providing more practical solutions for the problems discussed. The author could have also discussed the implications of cheating on the system. He could have discussed the impact of cheating on the system, the morality of cheating, and the future of the system.

This is the B-2. Advanced as it may be, this airplane has one thing in common with the first war-gigfltes of ancient Egypt... and with the air and space vehicles of the future. Someone must learn its course. Someone must navigate it.

For certain young men this presents a career of real executive opportunity. Here, perhaps, you will have the chance to master a profession full of meaning, excitement and rewards, as a Navigator in the U. S. Air Force.

To qualify for Navigator training as an Aviation Cadet you must be an American citizen between 16 and 26 years—single, healthy and intelligent. A high school diploma is required, but some college is highly desirable. Successful completion of the training program leads to a commission as a Second Lieutenant... and your Navigator wings.

If you think you have what it takes to measure up to the U. S. Air Force Program for Navigation training, see your local Air Force Recruiter. Or clip and mail this coupon.

There's a place for tomorrow's leaders on the "Aerospace Team"... U.S. Air Force.
