Censorship

CYCLE I

HAMDAM-O

BY M. W. DENNIS

FEATURES EDITOR

On February 9, U. S. District Court Judge W. Arthur Garrity Jr. passed a ruling which may change the structure and purpose of the college newspaper. In effect, he ruled that a state college president cannot dictate to editors of a student newspaper what shall be printed in it.

This case stemmed from the efforts of Dr. James H. Hammond, president of Fitchburg State College, to censor, with a faculty advisory board, the college newspaper, the Cyclist, after it had printed a four-page broadsheet in an article by Elder Cleaver.

What makes this ruling so important is that it is expected to apply to the conduct of all state college newspapers. This censorship that was imposed upon the Fitchburg paper was a direct abuse of restraint of expression and as such was heavy burden upon its constitutional viability.

Newspaper censorship in any form seems essentially incompatible with freedom of the press, the court said.

In order for a college to be able to restrict speech it must show that the publication is incompatible to the school's success of the educational process.

The court said obscenity in a campus newspaper was not the type of speech that was significantly disruptive of an orderly and disciplined educational atmosphere.

When the article by Cleaver, the Black Mohican, was sent to press, the paper read the article and phoned Dr. Hammond to tell him of it. It was then that Hammond refused to sign any checks for the printing of the Cyclist and the paper was closed down. However, local college supported the Cyclist with funds from their college paper.

In a recent interview I had with David Iacono, Managing Editor of the Cyclist, he told me the paper would be continuing shouting, the necessary money being allocated from the S.C.A. (student clubs association) of Fitchburg for this issue, until the budget has been approved for forming printing press.

The editor-in-chief of the Cyclist at the time of the interview was John M. Antinoff, who has been replaced by Peter Johnson.

In talking with Johnson, he said the current staff has been selected through a rather unorthodox course of action, was he to state that no matter what the outcome may have been, the

ALL-TECH Physics Students Win National Recognition

The proposal for the construction of a selectable frequency liquid laser has earned national recognition for two senior physics majors at Lowell Technological Institute in the recent annual competition sponsored by the Society for Physics Students and the Bendix Corporation.

The proposal for the construction of a selectable frequency liquid laser has earned national recognition for two senior physics majors at Lowell Technological Institute in the recent annual competition sponsored by the Society for Physics Students and the Bendix Corporation.

The decision has also won for Ira L. Gregory, a senior physics major, and Barry E. Charles, a senior physics major, the right to compete their invention. The SPS presented the TECH physicists the largest single award in the Student Research Competition, according to the announcement received by Dr. Donald J. Beigel, faculty advisor of the SPS chapter of the physics society.

Ira L. Gregory, a senior physics major, said he has received the SPS physics award for his work on the physics and applications of the University of Texas, Purdue University, and Georgetown University were also recognized for their contributions.

Ira L. Gregory, a senior physics major, will be announced in the next issue of this year's Technology. The award was presented by the SPS chapter and chairman of his fraternity, T. A. Fruehburger.

The student award winners were selected through a voter's ballot system, which represents a radical departure from previous years, and for which its creators expect greatly enhanced applications as a powerful research tool. Prior laser systems have allowed for single small frequency band output, a helium-neon laser, for example, producing a narrow output band of red light. The proposed system will make use of various liquid dies with associated wide band output to produce broad spanning the frequency range of regions within the visible spectrum range by a refining of the laser.

Ira L. Gregory, a senior physics major, will be announced in the next issue.

The LTI chapter of the physics society student chapters at the University of Texas, Purdue University, and Georgetown University were also recognized for their contributions.

By CARL CLINIAK

Johnson's 60s have become Nixon's 70s. The American People trust and support Nixon, for the 60s are all over. Even that significant except the Kennedy's! Has anyone heard the name Humphrey, Clinton or that Kissing Camilla? Did you hear whir the street prices went down lately? Kennedy has his free loy that will worked and projected very well to the American People.

Johnson had his Great Society ideology. And of course Nixon has his Arms Agency seems to intimidate anyone who knows what happening in Washington and up it in the way of the Nixon image. King Nixon and Eas Nixon have their way on some of the areas. Above it was not Nixon who found a bridge across the. Remember also the Can Never. That seemed to die when Nixon took office.

Lick, maybe! In short Nixon has not found the going directly of policy with the people with issues that could lend themselves to common consent and protest (particularly those of young people).

By high guard I mean to inversion of policy. The America has been hit but being given a chance to speak for itself. It has the potential to be silent majority but most Americans in general including the people of the 1960s and 70s. Nixon has calculated his moves to end the permissiveness era started by Kennedy and ended by Johnson's Great Society to enter into a period of stability and responsibility. Sounds good to a point. Ya, Nixon has gone directly to the people to attack their problems. What has been done to the people? Intention and the downsizers market. The national economy which is composed of people's working dollar. The American poor welfare programs and the national debt. The idea that the federal budget must be balanced at all "Cost" or it is an intolerable mistake. Remember the 60s and 70s. The Congressional spending of Congress are not the same thing. Change is a reality, Nixon's action is bad. People being hungry upon by Nixon and his royal court. (November 20, 1969) Nixon used to spend $150 a day at Washington palace last week. Judge Clement Byrdeworth was once for Nixon's gentleman until the Senate of this country voted him to be of Southern Blood. Democrats for 1972. Democrats against 38 Republicans for 26 Republican against 17 No matter how Nixon tries to reach the people through health-insurance plans, water purification, the nutrition act, education appropriations and crime legislation, it all will not be remembered as nothing more than an ill conceived way of campaigning for the votes of the people.

But what the people seem to forget is that once Nixon started a new bill for appropriation of money from the government program of the government must be cut back or stopped or have to be raised (except the space program). Also remember that this government program is paid for by the people. In short a new program in the government cannot make taxes for the people.

Nixon has been going directly to the people would with the dollar sign as his red, white, and blue flag. Nixon has been going directly to the people with the dollar sign as his red, white, and blue flag. Nixon has been doing the same thing as the President. He has said nothing of his relationship to his Business and the Labor. He has not been going to the government not initiated compulsory arbitration in the line to be the boss today in a year or the General Electric strike of not to bug the people.

The Nixon Administration maintained their no intervention stand in the up coming year? A Fall has become as he said about Nixon in 1972, maybe.

Nixon and his new policies of gaining edition to the people have divided the people of this Country. By divided I mean that his policies of them to be divided among the people of this Country something to hope for. Not in the sense of the supermen but being very material in nature. I think the Nixon will stop inflation if you the people of America support him. Richard Nixon will have to adopt the streets of America safe to walk at night if you the people of America support him. President Nixon will end the war in Vietnam if you the people of America support him. The very way you support. If you support something you are not about to critic of what you support.

This sounds somewhat militaristic to an example I will use the Vietnam War. The peace rallies are good. But what the people in the people who are talking about long War is right.

This means all one think of at an example I will use the Vietnam War. The peace rallies are good. But what the people in the people who are talking about long War is right.

This all leads to the predicted fact that Nixon is a prominent figure in our government. It is not the Vietnam which is the key to the war issue and turn to the American leadership.

This is a misunderstood fact that Nixon is a prominent figure in our government. It is not the Vietnam which is the key to the war issue and turn to the American leadership.

This is a misunderstood fact that Nixon is a prominent figure in our government. It is not the Vietnam which is the key to the war issue and turn to the American leadership.

Students
Rights
BY ALVIN C. FROST

This is the fifth article in a continuing series, that I hope has been received with rather more than I have taught it to be. Since I have begun this column, the harshness of disciplinary action against students at LTJ has lessened, and, hopefully, will become as fair to the treatment of students at more enlightened institutions.

I can in no way take the entire credit for this relaxing of the restrictions, but the purpose of these articles is to let the students know what is wrong and to give them a forum for change. If those conditions continue while the students have access to this kind of knowledge, then, the major share of the blame for those poor conditions will have to be shouldered by the student, the fraternity, the majority of the student body. The rest of this discourse will attempt to convey to you the necessity for change, and the need for widespread student support in order to effect it.

This is the policy to forego freedom yet duplicate agitation, are men who want crops without plowing up the ground, they want production without planning or lighting. They want the ocean without the awful roar of its undertow.

...Power condemns nothing without demand. It never did and it never will. Find out just what any people will quietly submit to in order to have you found out the exact measure of injustice and wrong which will be imposed upon them, and these will continue till they are resisted with either words or blows, or both. The limits of tyrants are prescribed by the endurance of those whom they oppress.

Frederick Douglass stated this in 1857, and it is not less true now than it was then. He also said, "If there is no struggle, there is no progress." College students must continually try to impress upon the administrators of their respective colleges. The Securities and Exchange Commission has said, that "The struggle for control should be conducted in an air of co-operation and advocacy." This is also directly applicable to college campuses.

Change is continual, for there is no end to it, in either direction. Because of the nature of change, its relation to time, there should always be an anticipation and a concerted effort toward something better that which has already been attained. Whenever a point is reached that is considered satisfactory, then, progress has ended, and, man will slip back into a much stiffer straitjacket of ignorance than is now apparent despite all of his...

Earl Bertrand Arthur
William Russell, Nobel Prize
Winner, has died recently.
Nonetheless, his thought and
feelings will live on. His life was
spent in search of truth. Truth in
Its manifest parts remains a
mystery. In man's continuing
pursuit of truth — and
hopefully, tenderly as well —
Berttrand Russell has served
and will continue to serve as
inspiration and guide.
In his autobiography, Russell
confides that he had
sought love with equal passion,
and found it. His passions
for love and knowledge have
brought him ecstasy, only to be
shattered by the awareness of
human misery the world over.
Russell, in one of his
optimistic moments, contends
that the worldwide adoption of a
board of acceptance, as defined in
his book, Skeptical Essays, and
greater emphasis on the
nurturing of constructive
inquirers, will revolutionize
human life and alleviate human
suffering. On the whole,
however, people seem to be
reluctant to make friends with
their enemies, and to cooperate
in elevating each other's
sufferings. Perhaps they fear
that without enemies and
suffering, life would become so
dull, unchallenging and unheroically
boring.
All people, however,
invariably suffer from grief
due to death of their loved ones and
the awareness of their own
forthcoming deaths. To some of
those who have had the courage
to carry on the analysis to its
dead end, the realization that
life is meaningless is too much
to bear. Then there are the
damnable sufferings inflicted
by an unpredictable natural
environment. Add to these
the stifling and suffocating
effects of nature's pollution and
minuses by Mankind, and we have
much more than enough to
suffer, and need not add the
vagaries of war. (Or is war a form
of energy?) Russell points out
that life can be made just as
intense and challenging (perhaps
even more so) by aesthetic
creation or scientific discovery,
and other constructive activities
that alleviate human suffering,
which is always present in full
measure even in the absence of

Spring Fun
To: All Student Planning to Visit
Fort Lauderdale, Florida
During the Spring Holidays 1970.
From: M.L. Rubler, City
Manager, City of Fort
Lauderdale, Florida
Date: January 7, 1970

I would like to take this
opportunity to welcome you to
our City and sincerely hope that
your stay will be a pleasant
experience.

In order that neither you nor
the City suffers any
unpleasantness, the following
suggestions and policies have
been instituted and will be
adhered to unrelentingly.

1. Do not visit Fort
Lauderdale unless you definitely
have a confirmed housing
reservation. Our police and
ordinances prohibit sleeping in
cars and/or sleeping in the open.
Campers or trailers are not
permitted to park on the beach.
If this type vehicle is to be
used as living quarters, it should
be parked in a trailer park
specifically licensed for this
purpose.
2. All laws that govern the
conduct of the individual will be
enforced. A person must be 21
years of age in order to purchase
or consume alcohol. Persons
quality of information, (it should
be noted that drinking in the
open is not permitted) narcotics,
use of false identification, or any
other form of disorderly
conduct and any other unlawful
act will be strictly
prosecuted. Violations of the
traffic code will result in
arrest and prosecution of
the offender.
3. Parents and school officials
of any and all students arriving
and during this period will be
officially notified.

Students should be aware of
the fact that persons who are
arrested and convicted on any
charges will have established a
permanent, and sometimes
criminal record against themselves which could have a
detrimental influence later in
life.

It is the feeling of the City
Commission, this office and all
of the City departments involved
that if your conduct while in
Fort Lauderdale follows your
personal guidelines while on
campus, your vacation will
indeed be a pleasant and
memorable experience.

*ceiling
and
visibility
unlimited

At Pratt & Whitney Aircraft "flying and visibility unlimited" is not just an expression. For example, the President of our
parent corporation joined PAWA only two years after receiving
an engineering degree. The preceding President, now
Chairman, never worked for any other company. The current
President of PAWA started in our engineering department
as an apprentice electrician and moved up to his present
position. In fact, the majority of our senior officers all have
one thing in common — degrees in an engineering or
scientific field.
To insure GAVU, we select our engineers and scientists
carefully. Motivate them well. Give them the equipment and
facilities only a leader can provide. Offer them company-paid,
graduate education opportunities. Encourage them to push
into fields that have not been explored before. Keep them
reaching for a little bit more responsibility than they can
manage. Reward them well when they do manage it.
Your degree can be a B.S., M.S., or Ph.D. in: MECHANICAL
AERONAUTICAL ELECTRICAL CHEMICAL CIVIL
MARINE INDUSTRIAL ENGINEERING PHYSICS CHEMISTRY METALLURGY MATERIALS SCIENCE CERAMICS MATHEMATICS STATISTICS COMPUTER SCIENCE ENGINEERING SCIENCE ENGINEERING MECHANICS.
Consult your college placement officer or write Mr.
William L. Storer, Engineering Department, Pratt & Whitney
Aircraft, East Hartford, Connecticut 06108.

GAVU might also mean full utilization of your technical skills
through a wide range of challenging programs which includes jet
engine field work and the necessary training, gas turbines for
industrial and marine use, rocket engines for space
programs, test cells for space vehicles and terrestrial ones, and
other advanced systems.

Nixon

(Continued from Page 2)

with its many young possessant minds. The victorious Nixon is rolling the country into a state of isolationism not just any time during the semester. If you would like to discuss the issue of isolationism, you are invited to attend our Stag party on Friday Feb. 20 at our home. Perhaps after thinking about it, you too will distinguish between frat and fraternity.

Just What Is
A Fraternity?

(Continued from Page 5)

YOU about their ideas of fraternity and invite you to visit with them at any time during the semester. If you would like to discuss fraternity you are invited to attend our Stag party on Friday Feb. 20 at our home. Perhaps after thinking about it, you too will distinguish between frat and fraternity.

...and a good part of the universe as well.

Interest? We think so. But what if says about Norden may interest you more.

Technologically, Contact Analog represents a sophisticated utilization of analog and digital techniques, illustrating the kind of interdisciplinary activity that's made our team problem-solving approach so successful. Creatively, it demonstrates that new ideas—radical ones—get paid the ‘idea’ stage at Norden. And from a business standpoint, indicates the fact that Norden's success is based upon innovation, innovation in areas like pilot displays, airborne radar systems, ground support equipment, optical devices and computer technology. If you're interested in looking beyond technical horizons, why not look into

Norden, located in Fairfield County, Connecticut, just 41 miles from the heart of New York City,...we offer a corporate-financed Graduate Education Program...and we have openings in Research, Development and Manufacturing. 1970 graduate EEs and MEEs are invited to contact our Placement Directors to arrange an on-campus interview. Or forward resumes to: Mr. J. E. Fitzgerald, Helen St., Norwalk, Conn. 06852. An Equal Opportunity Employer (m/f).

Student Rights

(Continued from Page 3)
intelligence.

...Whenever a number of students have enjoyed for a considerable period of time certain opportunities for getting wealth, for exercising power and authority, and for successfully claiming respect and social deference, there is a strong tendency for these people to feel that they are "born to rule" and "feel right." Stokely Carmichael & Charles Hamilton-Black Power. These precarious, thinly rationale on college campuses all over America. Administrators and students have been conditioned and often unclear direction of power so that they can consider the University as an extraction of themselves, rather than a "school" of "education" and the older age quest for another Knowledge. Attacks against ideals of truths are taken as an attack against the man, or men, who, in their minds, synonymous with the school, its goals, and its purposes. It is often very hard to decide whether the University ends and the administration begins. A differentiation must be made as to who the true, the authentic, possessors of power are, before the part that has been breached. Power must be directed against the depositories of power, if it is to be most effective.

"It should be noted that a prince may in some cases make common cause with one more powerful, thus himself to acquire wealth, influence forces to his to.. for. If he was rest to his power, and princes must avoid as much as possible in order to use the will and pleasure of others." "Blackwell's The Prince"

This fact has been exhibited on many college campuses. Student groups have, by necessity, had to ally themselves with groups or forces more powerful than their own in order to be 'heard.' Often, this alliance is distorted by a contradiction in interest between the two different groups. Because of this inability to find a base to work from and to act as a collective entity, many student groups are in a state of confusion as to the extent the students are satisfying in a sense of discord, mistrust, and an indescribable silence. It is evident in theUniversity is the public power structures of many colleges and universities that student rebellions have remained intact, past their time limit for that reason alone.

SDS is a prime example. Much of their effectiveness, if any, was lost when they became bogged down in factionalism and all-out personal disagreements. They need not use rational reasons for change if the majority, SDS is an example of a simple, meaningful nature. Besides the choice of tactics, groups such as SDS offer very little in the way of replacement (or that which they seek to get down) and it destroys. To the contrary, most Black student groups are gold oriented, and their purpose is to think of them with change. Violence may well be used, but, in used with the sense of direction, constructive. Many white student groups, such as L.T.I., R.U.M., Warmen, etc., have evolved to the point where violence is an end in itself. Non-violent violence such as this will only serve to further alienate those on the right and cause, and also, to cause a greater use of repressionism in dealing with them and others within the society.

Many administrators are so used to thinking of the students as just means necessary to remain in status quo. Students are often forced to violence because of this condition, for reason and rationality have deserted them as much as they have deserted it. It should also be brought to mind that many of these same types of administration are unable to cope with campus demonstrations and violence when they do occur, because blame that they have produced a system that by its very nature is always changing to an efficient decisions. Solidarity among students will help, but, being right, in itself, will not answer. According to student demands, Power-change and the discriminating judgement of the two to weak points will drive power-inaction.

Self-determination for students, for all people, is the ultimate goal. "All power to the people." One group in power, but a large part of power to who ever the decision is left to the people. "We are all in this together." Some of the tactics of students have been harsh. At all times, though, a sense of indifference do not bend to the Is the very beauty of to the most others. The students. "Are we all in this together?" Some of these tactics have been harsh. At all times, though, a sense of indifference do not bend to the Is the very beauty of to the most others. The students. "Are we all in this together?"

"The truth of belief is itself, not is recognized by one person is less the truth than if it was believed in by all. It is true. You, if we all believe in it or not, it is true."

Somehow the students must find a way to take over the administrations of the schools for change. To do otherwise would be to accept the present disaster. These two warring factions must pull together, many minds must work together, and progress together. Abraham Lincoln once said that "a house divided against itself cannot stand." He also said "...I do not expect this house to fall. I do expect it will cease to be divided...it will become one all thing or all the other thing. He was lost in the struggle, during the climax for change, enough progress toward a solution, an a solution, a solution also needed. In the end, we will all have to work together. This is the only way to prevent the protest movements when it is realized that for all to today's violence, everything is the order of the new day.

The path to change is becoming more and more conceivable. Some, and that to work together on that which can be agreed on, while searching for a way to reconcile our uncontrollable differences. The concept of the "university as a place to d'etre as to instil within the student a sense of individuality"
What keeps dynamic young engineers like Jim Bregi and Jeff Quick at Ford Motor Company?

"They tell us to do it... not how to do it!"

"The real world is out there," says Jeffrey Quick, Product Design Engineer in our High Performance Engine Department. "These aren't academic problems... not when you've got someone waiting for a solution!"

"My job is to make Jeff's designs work," says Jim Bregi, Manufacturing Engineer at the Dearborn Specialty Foundry. "Between us, we have a lot of responsibility, but that's what makes this job so challenging." After only three years with Ford Motor Company, Jim is Supervisor of Foundry Facilities with a section of eight people working for him... including three graduate engineers. His day might include anything from solving a problem in thermo-dynamics to helping hire a new engineer. "I don't know of another job that would have allowed me to move ahead as fast as this one."

"They're completely flexible," says Jeff. "Whether it comes to trying something new or changing job assignments, you get to play a part in your own destiny. I see people getting ahead fast... I wouldn't be here unless I were sure I could, too."

There are opportunities to "move ahead" in every field of engineering at Ford Motor Company. If you want to put your engineering degree to good use, see our recruiter when he visits your campus. Or contact Mr. Richard Rosensteel, College Recruiting Department, Ford Motor Company, American Road, Dearborn, Michigan 48121. An equal opportunity employer.

Free Brunch

Each year All-Tech Weekend's list of activities grows in number. This year was no exception. The Student Council introduced the idea of a brunch. The original idea was to have a high class affair at the Spear House. So the Student Council had to up the price of the weekend tickets from $10 to $12 to cover this cost. Finding the Spear House all packed at a price too expensive ($3 per person), they decided to step down to the cafeteria level.

The outcome was a brunch at Smith Hall cafeteria which included a cup of coffee ($1.50), a cup of orange juice ($1.00), and a Danish pastry ($1.15). The total cost of brunch came to at most $4.50 and you got all that for only $2.80.

Student Rights

(Continued from Page 6) that does not dull his insight into his relationship and his interaction to the total system society.

This means working within a human system in order to change it. Students must understand how power is garnered, how it is retained, and the full implications of its use. Then, the students must use the same tools as those used by people in power. This is a stark reality, it will not, and cannot, be bent by a single idea or, even, rationality. It must be moved and molded by that within which it was born, power incarnate.

Students can take up the struggle of those whom they wish to displace without sacrificing their integrity. The knowledge that what we are doing is for the good is all that is needed to sustain their individual spiritual growth and change. The Roosevelt Trials were a supreme test of this by showing that there is no higher calling than one's own conscience.

Change implies a kind of idealism in today's society, but, powerful change, constructive change, will demand a staunch adherence and acceptance of reality. The Phoenix of history is rightly dwelling on our nation's campuses, and its' very survival may well be dictated by what happens to this intellectual battleground. Inaction, if it must be remembered, will always exact a dear price.

Cloverlay Inc.'s Destruction and Soul Machine

by Bob Sheriff

For the 25th straight time, Cloverlay Inc.'s finely tuned destruction and soul machine, which is labelled under trade name of "Joe Fusion", was proven in fine working order as it destroyed Jimmy Ellis in fine rounds of boxing for the undisputed (except for Muhammad Ali) heavyweight title. The company steel was formed in the early 60's when 40 businessmen from Philadelphia invested $200 each to back Fusion. Under the able management of Yankichich, Joe was guided flawlessly through an Olympic title, around a WBA tournament for Ali's (or Clay's if you prefer) disputed title, and into the heavyweight title in certain states and countries. Last Monday night was the almost final objective of all plastic. Still in the way is the vision of Clay as the undefeated champion, beaten only by Uncle Sam, and that was under Uncle Sam's rules.

The fight itself provided a good amount of action for the twelve minutes that it lasted. The first round was Ellis on top as he opened fast with some quick jabs and powerful rights, but "Shadows" Joe was equal to the occasion and kept coming. The second round was the beginning of the end for Ellis as Frazier started to lean momentum. His unrelenting pressure was wearing Ellis down, and Jimmy wasn't staying out of Joe's firing range. Joe won the second round. The third round definitely told that

LTI SPORTS
LACROSSE

AMERICA'S FASTEST SPORT ON TWO FEET

CALL OUT FOR LACROSSE

With their newly awarded varsity status, the lacrosse team begins its preparation for the coming season early. An initial organizational meeting was held at 7 p.m. on February 19th in the Multi-purpose Room of the new Library addition. License forms were shown followed by a brief remarks by Coach Bernie Shapiro. Female practice will begin on February 23rd at 4:00 and will be held daily at that same time for two hours. A physical fitness class has been underway since February 9th, which runs every Monday, Wednesday and Friday from 4:15 to 5:15, and this will continue until the team practice begins on the 19th.

The team will be playing 11 games and 2 exhibitions this season, a far cry from last year's 6 game schedule. Last year's fine showing is the main reason for the expanded schedule and the variety status, along with the fine support lead by Coach Bernie Shapiro and Grant Crow. The team ended up with an even 3-3 record in the first organized season, defeating Babson, Dean Jr. College, and Springfield, while losing to Boston College, Boston State, and Brandeis. Six seniors graduated off the team, two of whom will be sorely missed; center-forward Ken Smith and goalie Dick Schiel; Midfielders Les Luk, Mike O'Neil, Bill Connors, Court Fehlner, Pat McGinn, and Bill Saynak.

ATTENTION Bill Fricoski, Co-Capt.; Mike Kiewal, and Mario Pepe. Coach Shapiro is looking forward to the addition of some experienced freshmen this year. If you're interested in playing, don't worry about the lack of experience, only three members of the present team ever played before coming to Lowell Tech.

Bowling

The girls team in second against Boston University. Other schools participating were U. Conn., Southern Coin, Central Conn., and University of Bridgeport. Rick Mayforth placed first in men's singles while Eric Frazier and Rich Obrumko placed first in the men's doubles. They also played against Western New England and Bright along with the above colleges.

LTI Hockey

When the subsidy of LTI sport operated by a "ball season", don't forget hockey. The rip snorting Cobbie Gymnasium may not be completed yet but hockey still sit in the Parkers of six of the last eight nights. Coach Bill Riley's squad has played some fine hockey led by junior Gary Bedrock and sophomore Mike McCullig, in the scoring column. Team Leader in the net, and Bud Davis and Pat O'Keefe on defense.

Most recently, The LTI pucksters put away Holy Cross for the second time, 4-3; and Babson College, 9-4, while dropping at the hands of AIC. a New England powerhouse, having an up and down season.

LTI Basketball

Junior Mike Fincosco continued to lead the Terriers in both the Christmas and semester breaks as the LTI hoopsters pounded the hardwoods with amazing consistency. Mike is averaging 24.6 points per game with 15 rebounds, 3 steals and three assists. Tech is now 9-7 on the season and is ranked high in the New England ranks.

After starting the season with two impressive victories over Tufts and SMU, Coach Jim Stone's Terriers went sour and turned and turned in the double-digits of defeat in four straight games. However, this year's Terriers didn't die and with Lowell State providing the springboard, Tech rebounded to win four of the next five contests. After dropping another one to a nugget Worcester Tech club, once again Tech had a winning streak. This one is still alive as the Terriers have counted three to a row over Lowell State (98-83), MIT (71-64) and most recently Suffolk University (97-24).

There have been many tales of heroism during this current season and many of them have been authored by Fincosco, but there are many others also. Take for example, 6'9" sophomore center Mike Cameron, who started the starting lineup on the first day of practice. Midway through the season, in the Nichols game, Mike severely sprained his left ankle. After sitting out two full ball games, he came off the bench with a mile of tape on his right foot and picked the Terriers up with an 11 point, 9 rebound performance against MIT. Mike Fincosco says of "Camouso": "What a Riffraff".

Another case is that of Captain Al Spaul. Al has been at the forefront of the Terrier book and played through most of the season. Many a good athlete has called it quits in the heat of this intensity but that it why they call Al "captain." Not to be denied, Al has scored in double figures in seven of the last eight games, and is second on the squad in steals, which points out his consistency in the defensive department. One more for non-Academic probation has kept some fine athletes on the sidelines at LTI. That is what happened to sophomore Henry Prydell. He missed 14 games of a 23 game schedule before he was able to return against Lowell State recently. Coach Stone: "We will give him the job on both ends of the floor." Well, Henry jumped in 13 points and grabbed 4 rebounds while shooting 6 or 7 from the floor. There are the type of heroes referred to by Fincosco, as well as being nominated weekly for the HCAAC player of the week. The Terriers will be in action against Franklin Pierce.

LTI Wrestling

When an athlete speaks of the thrill of head to head competition, one sport comes to mind immediately. That sport is wrestling. Under the guidance of Coach Joe Spano and Gerald Grossi, the LTI Terrier grapplers have come up winners in six of seven matches this season. The one loss coming in the first meeting of the season against the University of New Hampshire.

Some '84 and young, talk to the man at the desk of Costello this year as the grapplers lead all winter sports in winning percentage with an .857 mark.

In the LI match, the Terriers were victims of some clutch "chokeing" by the referee in two tight situations. Costello was scored with the off-sides which he credited with a major portion of the loss.

The Terriers will host Boston College on Monday, Feb. 16th at 7:00. This will be a good take for the student body, as one of the top ten teams in New England and hosts another of the big Boston powers.

COOKOUT FOR SPRING VACATION FUN?

LOW PRICE, INCLUDES

- Beer and Wine for One Week
- Low Price Room and Board
- Free Entertainment and Cocktails
- "Camoos" Summer Nights
- "Moozies" and More
