Textile Loses Opening Game

The March meeting of the Lowell Textile Institute junior section of the American Association of Textile Chemists and Colorists was held on Friday afternoon, March 26, in the Chemistry Lecture Room. No business was transacted. The circular meeting being given over to the reading of a paper on Peroxide Bleaching by Mr. Bert of the Boston and Portland Chemical Company. Mr. Bell spoke mainly about hydrochloric acid, the use of which is strongly in the field of the future. He brought out the fact that there is a great deal of text for business on "the subject of Peroxide Bleaching."

The meeting closed with a vote of thanks to Mr. Bell.

Thomas Joy Speaks on Textiles in Rubber Industry

At April Meeting of Boston Alumni Section

Thomas Joy, president of the Boston Alumni Section was held on the first of the month on the topic of "The role of the rubber industry unfolding." He discussed the requirements of this field and the general economy of the situation, showing the condition before and after the revolution. The meeting was attended by 252,242,200 of cotton fabrics in the Spring of 1838.

The following attended the branch:

- F. L. McCook, 10. 3. 5. 0. 0. 0.
- C. H. Parker, 20. 0. 0. 0. 0.
- H. F. Frost, 20. 0. 0. 0. 0.
- M. T. J. A. Langdon, 20. 0. 0. 0. 0.
- J. A. Chaves, 20. 0. 0. 0. 0.
- W. F. Farmar, 20. 0. 0. 0. 0.
- A. M. Budding, 20. 0. 0. 0. 0.
- E. B. Cowan, 20. 0. 0. 0. 0.
- J. A. Kippens, 20. 0. 0. 0. 0.
- D. M. Gilman, 20. 0. 0. 0. 0.
- H. E. Parry, 20. 0. 0. 0. 0.
- T. H. Thomas, 20. 0. 0. 0. 0.
- J. T. Conlin, 20. 0. 0. 0. 0.
- A. C. Keeler, 20. 0. 0. 0. 0.
- D. R. Dunlop, 20. 0. 0. 0. 0.

The meeting was adjourned.

A. A. T. C.
On Friday each of the various departments of the school will be in full operation. The day is not a "show-off" day in any sense. The regular routine will be followed and the only exception is that students will be present to act as guides for the public. All the processes of cotton and wool manufacture will be shown. Perhaps one of the most interesting features will be the demonstration of the manufacture of rayon yarn by the viscose process.

We feel sure that anyone visiting the school will be well repaid by the general knowledge they will pick up along. From the standpoint of the school there is not a doubt but what we shall benefit by it. It is certain that this open house will interest many more people in the Institute and it will result in increased enrollment and increased publicity.

ANNUAL SHOW HUGE SUCCESS

LOWELL, MASS.
The first of a series of informal house parties was held at the R. O. F. House on Thursday evening, March 21.

The committee in charge of the affair under the able direction of Morris Greenberg took charge of the huge dance floor with minute care, so that the invited guests and the boys enjoyed an enjoyable evening of dancing and bridge.

The young ladies invited by the committee proved to be the best possible companions for the evening, so that neither of these affairs is already on the minds of the guests.

The party officially began at 9 o'clock when several of the bridge tables were occupied by highly competent players. At the termination of play, first and second prizes were awarded to the girls. Joe Wallace was first prize with a set of rubber-handledakyrs while Too Glackert took second with a nice box of cards and a nifty companion.

Prior to the Fashion show, which was well attended by the folks in the Bob City.

Keepin' up their good form, the high grade rocks were served by drinking innumerable socials. From the top of it, the boys

 Destruction certainly did the work of getting up our swing party purely socially.

The district was the most interesting part of the evening came into view. The committee in charge of the affair had arranged a series of small groups to give an amusing evening. Several of the boys decorated their rooms to the utmost satisfaction of all present.

Since an affair of this sort has no definite aim, the only thing that all concerned got home safe and sound in the wee small hours of the morning.

Our own "Magnum Wallenberg" seems to be recuperating pretty well after his brief stay in the hospital. We hope that the after effects of cold which will not produce his troubles after complete recovery is reached. If it does, he'll have a come back again. "I'll kill you if I see you anywhere." But at any rate he'll be able to answer, "No, I'm more careful now you have given me your paws."!

The eternal evening was cry of "Who wants to hear about a little game?" And the funny thing is that they're all about to hear about a little game!... and the funny thing is that they're all about to hear about a little game!

The committee which has just closed to be proud of this affair was made up of Dan O'Brien, chairman; David J. O'Brien, and D. Joseph O'Brien.

The radio apparatus at the house seems to be installed and then the boys may call on our radio nature. In the course of a few minutes, his apparatus which consists of a pocket crystal set plus a hand set keeps him busy these evenings. He reports progress in that he can now hear a burning sound in the head set. Music, oh, well, that'll come with time. We wonder that he is able to listen and not chill.

Ben Glackert, who is connected with a hockey team, has covered his connection with the American Alliance Products Co.

DELTA KAPPA PHI:

Stan Billig, 23, has accepted a new position recently. He is now assistant manager of the General Com- munity Laundry Service, Inc., New York, N. Y.

Johnnie Bates was in town this week, leaving with a friend to become a detective in the Bob City.

Keepin' up their good form, the high grade rocks were served by drinking innumerable socials. From the top of it, the boys

Dan O'Brien certainly did the work of getting up our swing party purely socially.

Peterson, the district recorder was sympathetic with a sleepwalker who had just lost her husband.

"You're Mrs. Peterson," we said, "you walk him very much." "Well," went the answer, "he's kind of a big fellow so I don't think he's going to go to bed and find something in the house.

HISTORICAL SKETCH OF THE LOWELL TEXTILE INSTITUTE

The Old

By virtue of legislative acts of 1895, the Lowell Textile School became known as the Lowell Institute. As a result of the Institute in order to more clearly define the purpose of the instruction, a new Board of Governors was set up. This Board has been the natural result of the work of the several persons who have founded the Lowell Textile School. The articles of incorporation were authorized by Chap- ter 275, Acts of 1895, and provided for a corporation to be known as the Trustees of the Lowell Institute of Lowell, Massachusetts. The Board met on the Board of Trustees established by the corporation on June 1, 1895, but it was not opened for business until February 11, 1897.

In accordance with the acts of incorporation, the Board of Trustees consisted of twenty permanent and self-perpetuating members, three-fourths of whom were to be annually engaged in, or connected with, textile or kindred manufactures. In addition, the Hon. Charles H. Sturges, the President, the President of the Lowell Institute, the President of the Circumstantial and the President of the Textile Institute, were ex-officio members. Legislative acts of 1905 and 1906 authorized the Board of Education to select four members for periods of four years each.

By virtue of the said amendment to the State Constitution, as prescribed by Chapter 717, General Acts of 1918, the jurisdiction of the school was transferred on July 1, 1918, to the Commonwealth of Massachusetts, and the central and management of the school was vested in a Board of Trustees appointed by the Governor, "with all the powers, rights and privileges and subject to all the duties" of the original Board.

In locating the Institute at Lowell, which has been called the "Mother Textile City of America," considerable attention was paid to the availability of teachers, practitioners in the woollen and cotton industries. The Institute has been the subject of comment and general interest in the products of the great Merrimack Valley textile district.

Although the school was formally opened by Governor Roger Wolcott on January 30, 1897, in rented quarters in the factory town of the city, it was not until January 1, 1903, that the first building of the present plant was ready for occupancy. On February 12, 1903, Governor John L. Bates declared the present building open.

The New

The United States Civil Service Commission received graduates from this school for employment in the Federal Government, as well as for employment in the different departments of the government.

The day classes have been open for not less than three or more years to the instruction required in preparing to enter the textile industries. It has been found necessary to require of all such students educational qualifications similar to those given by regular four-year courses of high school or academy of good standing. The classes are held for about thirty weeks of the year, and for those who are unable to attend the day courses. They are also held in the evening courses, but are open especially to meet the needs of the industry at large.

The headquarters of the Institute, having been placed by the Federal and State educational boards in the city of Lowell, is ready for the institution to embrace which access was provided to the city and is the central fabric of this country.

The northern section is occupied by the General Offices, En- gineering and Finishing Departments, and Machinery, while the southern which is entirely occupied by the Chemistry and Dyeing Departments.

Kltson, who is a leading American engineer, has been secured to the memory of Richard Kltson, who was contrib- buted by Charlotte P. Kltson and Thomas K. Scott, has daughters: the Institution Company of Lowell. This company, which is entirely owned by the Massachusetts Educational and the Chemical School.

In the library of the Lowell Textile Institute, at the head house 75 by 25 feet, three stories, and a basement. The first floor is occupied by the Cotton Yarn and Winding Department, while the second floor contains the Chemical and Educational Engineering laboratories and the Machine Shop.

The Fairmount Street Building forms the third side of the quadrangle, and consists of three stories, each 25 by 25 feet, three stories and basement and contains theFriday section of the Cotton Yarn Department, the Design and Power Waving Department and by the Woolen and Worsted Yarn Department, and consists of the lower floors on an equipment for the manufacture of wool yarn from the British and the American. The upper floors are occupied by a large variety of plants, chemical and medical, and in a section of the building for the student hospital and recreation rooms.

Derby Avenue Building was erected in the summer of 1912 from plans prepared by the Engineering Department, which also had in charge the work of construction. The building contains the fourth side of the quadrangle, and in outward appearance corresponds to the architectural features of the other school buildings. It is a single-story building, and has the dimensions of 150 by 75 feet. Its interior is fitted with custom-bolted iron work during the summer of 1912, when the branches were to be shipped for shipment for shipment. The room to give light reflecting walls which are ad- vantages for the work of cutting, testing, and determining the color equipment, which can be arranged in the rooms of the students. The building for this purpose was provided by the Society of New England. The building is of modern construction adapted to educational uses and contains approximately 161, 652 square feet.

Campus

Through the generosity of Mr. Fred- erson, the Institute has been provided with a campus and athletic field of about 3 acres. This has been carefully graded and levelled; one, for baseball, football and track.

To choose this field the Alumnae Club of 1905, has been partly built. It is made of forged beam supported by an iron column, each section is contributed by a class, so that in the course of a few years this fence will entirely enclose the field.

On the upper floor of the Fairmount Street Building there has been provided a recreation room for the use of the students at such times as their attendance is not required in classes. In the basement of this building there are rooms for the use of the athletic teams. Connected to these are showers and dressing rooms.

The upper half of Southwick Hall has been equipped with sanitary apparatus. The principal rooms are divided into sections, a parallel hall, a dressing room, and several sets of stairs and single stalls which have been provided in order to be sure that no student having any dangerous physical weakness takes part in any athletic con- tent. It is the duty of the athletic teams to offer to all the students an opportunity to engage in physical exercises such as are provided in the gymnasium, and an opportunity to all the students to engage in physical exercises such as are engaged in the gymnasium.

The Institute is producing with the advan-tages of the development of the last ten years. Experiments among them, points of the various athletic teams, and education in the various athletic teams, are admitted to a satisfactory physical training.

DESIGNING PREPARATORY WEAVING FINISHING SELLING

Where do you hope to fit in this picture?

If in DESIGNING you hope to create novel ideas and combine effective and good designs with the quality of materials, you will be best fitted for our Preparatory Work. The study of the actual manufacture and weaving will be taught in the Department of Finishing, where the student will have the opportunity to combine the various processes of weaving, filling, and finishing, so as to produce a marketable loom sample.

FINISHING shows marked growth due to improved adjustment of LOOMS.

Designing is a proving ground for many of the students who have become instructors in the schools.

The Textile Institute

Describes the effects of new developments in LOOMS on commercial and industrial looms, showing the various advantages of various types of LOOMS to be produced for the maximum of good quality, best economy, and maximum production.

A CAREER OR A JOB

(Continued from Page 1)

The man is who has a good friend, who can lay out for a definite
in life and who has charted his future program to that point of main
independence to which we all aspire. Analysis of interests in scholastic,
agement, and social activities, the advice and counsel of college pres and
 successfully, business associations, and intimate friends are all helpful to the
individual in making his final decision. In the history of every classical form
mention, there has been some "big brother," many several, in whom the
recent graduate was often referred for vocational guidance. Perhaps, "big brother" was unusually success-
able, perhaps he had a large list of business friends, but in either case
he had visited similar and next in the younger graduate to cr
nally as the "opinionated" grad manager of vocational. Wanted to
"big brother," influential individuals in the study of the employment require-
ments of and, the opportunities exists in business in general and open up
opportunities in particular; the scopes of his activity was naturally the
relation and position of his friendship.

The next development in student guidan
t be the appointment of a grad-
uate committee, which
merely meant a cross-mission of topics, but with an elimination of the stunted
incompleteness of the individual mem-
to cope with the situation beyond the
limitations set forth.

A few of the large colleges, however,
and particularly those located in
metropolitan centers, have now es-
horted established appointment offices as en-
trance functions of their personnel depart-
ments. The number of placements made per year by one department
probably does not warrant the expense of an extensive field work by the
industrial counseling. At any rate, this
is the policy of the University Club.

That there has been a general de-
mand in graduate placement work
is undeniable. It is successful, there-
fore, with the realization that the
people who study the subject of the
time, are interested in the work of the
University Club, and it is logical
A little over two years ago, the
and of the University Club, the
Club took the matter under consider-
journal. It was felt that a University
Club could and should stand for more
in the college, as an institution of
athletic institution, that it could per-
sate a very real service to the college
ment, to business, to education, and to society. Accordingly, it estab-
lished the Department of Education and Vocations as a staff depart-
ment of the Club, for the following
purposes:

1. To function as an attention of the personal work carried out in
Tennessee and universities, and where none exists to foster such
department.

2. To function as an extension of the personnel organization in
Tennessee and industry, and to assist in development of metho-
des of selection and training of college graduates for executive
positions.

3. To gather, classify and disse-
minate information, both new-
and, and current, relating to
specifications — which will be
of educational value to young
men preparing themselves for
business and professional
life. It is not to be considered
in the proper selection of a
career.

Four member groups constitute the
Department:
1. General Committee on Educa-
tion and Vocation.
2. An Executive Committee.
3. Council of Personal Executives.

The Committee on Education and
Vocational of approximately one hun-
dred students to the governing body
of the department and is composed of
heads of prominent and well-established
organizations in business, industry and
professional fields in New England.
No of the members of the Committee on
Education and Vocations constitute the
Executive Committee of the de-
partment and supervises its activities.

The College Counselor represents the
New England colleges in the Depart-
ment. Each college has a representa-
tive in the Counselor appointed by its
president.

The Council of Personnel Exec-
duties in executive responsi-
for employment in business and
selves in their personal and
in New England. The Council is established to
bring the department into more tie
ment, and to assist the personnel
most directly responsible for
employment. It is the function of the
Council to keep the standards of the
personnel work high, and to
on semi-annual trips to
placement work.

The central committee, its main
function, is to foster the program of the
department, to direct its development,
and to keep the personnel work of
New England colleges up to the
standards of today's business and
vocational world.

Newport controls all the processes from mining
the coal to the finished intermediate and dye-stuff.

Newport qualities are of the highest.

Newport vat colors (Anthrene) are America's standard of excellence.
