Lowell Textile Basketball Team Shows Promise

The lettermen of the L. T. I. basketball team have elected Louis Athanas, captain, for the season. William W. Welch has been elected manager.

Master's Degrees At Lowell Textile

It has been announced in the various newspapers that it has been recommended that several textile instructors be granted the degree of master of science in textile chemistry and master of science in textile engineering.

Turkey's Five Year Textile Industry Plan

The economic policy of the Turkish government is a number of important changes. Exchange has been stabilized, the persistent decline in the volume of exports has been appreciably checked, the volume of imports has been greatly reduced and there is now a favorable trade balance. Industry has been encouraged. The employment of labor has increased, and the Turkish government has directed

L.T.I. and the City of Lowell

Due to the renewal of the Mayor of Lowell to transfer the annual washday sale of $12,000 to the account of the Institute, there is a good possibility of having the innocent victims of payday games. Just how long this will continue is unknown but there does not seem to be any logical reason for continuing the practice.

Rifle Club Bows To Merrick Valley Team

On Thursday, December 3, the Merrick Valley Institute Athletic Club dropped its first match of the season to the Merrick Valley Team. The score was 55 to 46. Unquestionably, the rifle team would have made a better showing if the team had had more experience. Failed and Conant were high score getters for Textile, while Massers, Channell, and Shinkle were the leading scorers for Merrick Valley Club.

In Review

Today we present the last Test for the year of 1935. It marks the passing of a year that has been of extreme importance in many ways. The world perceived its share of religious strife, civil unrest, and financial combat. The social system has undergone many changes and indeed these changes are not always of the better sort.

In foreign lands, we've witnessed the usurpation of power by the dictators whose word is law and to whom their subjects bow. The hate no longer exists and that institution which is the foundation stone of society has been burned under the bloody sands of mad militarism. The right to worship according to a man's desire has been denied him and the various creeds have been sorely tried by those who believe in their power without philosophy seems to be "Me and God." Generalissimo, before you crucify our own country investigate the history of a country thatcost two billion dollars; then if you complain about the rise of dictatorship in America; we can do nothing but have a feeling of pity for your conception of liberty.

Unhappily, the greatest change has been in the nature of our economic system. The death of an man's relation to man in past years, very little thought and energy were expended in this direction. The laborer had to toil and work in order to get power. He could not be cared for himself was left to become a charity case. These acts are strenuously opposed by manufacturers who quoted the old English Deluge, Wing, that men could not be claimed that a man in industry was that of a fellow employee and that the owner was in no wya responsible. Evidently a man's life mattered little in the way of money; perhaps it was regarded as avoidable human expenditure.

In the past year much has been done in an effort to obtain for the common man a just portion of what is rightfully due him. Such an effort has been strenuously opposed by those manufacturers who are as determined today as ever that such a move would be dangerous. In theory, our financial system applies to all, equally.

We have been led by the events and we firmly hope we, then their frantic fears and nitwits expose them as of the calibre of the exploiters of the masses, and to a far superior life. Therefore, we say, "For God and Country," We are thankful to our good friends, Demographic and Social Justice, A sincere thought is contained in the following short poems. Indeed it is a fitting philosophy for the Christian, and a moving thought for man.

What is success? Is it to hold
Great wealth and power in your hand?
To have men how to your command,
Made fortunes slaves by chains of gold?

Is it to stand from all apart.
Crowned with what men may call success?
To win the world, to

And win the love of every heart?

Is it to die and leave behind
All you have toiled for through long years,
To the turning year. A friend or
Of friends you made by the way.

That is Success!

In the 50th birthday of The Test for this school year, a special was published on "Atrletics." It is the story of a number of students who are not in the least hostile to athletics, but do believe in a change. What socalled "track and field" and "athletic" are. The story of a group of younger men is the story of their own school, but it is not. Thus is the story of a number of things such as real, solid work, hard play, and, even the rightest baffled. He has his symbols, he who could decipher such a mark should get the Nobel Prize.

Our operation lover Lincoln, gave the secret away recently when he ad

The Passing Year

The wave is breaking on the shore,—
The echo faintly fills the chime. —To-day. 

The dust of time is lifted;—
Once more across the brightening eye.

The sunshine of the morning light;

The year departing leaves more high
Tithre's heartfelt and last — Whittier.

New Type of Fabric Made In Europe

Wood and Cellulose Fibre Used in Making Carpaccos.

MILAN—An effect on the part of Italian manufacturers to substitute wood and cellulose fibre for cotton fabrics is causing some apprehension among American cotton agents in Italy.

After a year's experimentation with the new fabrics, the manufacturers have begun to flood the market with smart shirts, blouses, and new materials for garments for both men and women. American producers supply a large part of the raw cotton imported by Italy. The Italian manufacturers hope that their product will cut cotton imports by 10 per cent.

The manufacturers for many years expected to participate in the artificial silk before inventing the process. It aims at the fibre is much more like that of raw cotton, but is the most important advantage of being free from foreign substances such as dirt and leaves. The staple length is much shorter and can be produced in any shade of the desired style. The artificial silk is far superior to the natural silk in the effect of the quality of the product. It is made from a substance known as methyl cellulose, which is its main ingredient.

A variety of the product (trade name—Sindacol) with 3 per cent of wool produces a fabric which the company considers to be suitable for the warm winter wear. Other mixtures may be effected with small percentages of cotton, rayon, linen, etc.

Without a mixture at all the production makes a fabric claimed to have the same strength and durability as cotton, although having a slight shine. The new suit materials maintain the fabric does not have the same wearing qualities of ordinary cloth.

Before introducing the fabric on the market, the production has been experimented by exporting it to Germany, where they say they met with great success.

THE TEXT

Faculty Row

(Add material pertinent to this column submitted by members of the faculty.)

Well, Well, so there has been a depression by "breaks," too. Of course no one person can be aware of this phenomenon while he wrote those admirable reports about the "breaks." But now, every time he was a football star, every time he was a basketball star, he worked those "breaks." So you hoopers work out.

Their House Masters added to list of many friends at the last "breaks" that of the house masters. It is rumoured that Mr. Brown, the house master, isn't No. 1. He has been absent, but right now I don't see him.

You know between the instructors and the athletes who can take it for granted in this column is going to slip. Oh, yes, there are those who can give but won't take.

You know, in sporting a new Olds, Fred, Churchill is driving a new Chevry. Good times are coming; I know, because they are like the winter the I'll have to be satisfied.

One instructor says that the no care is no good, wouldn't know.

The Community Chest workers have come and gone. I don't envy their jobs. This year you must have been beguiled by the soliciting. Still, and all some of the Faculty "don't know," I should say.

"LET'S BE INGENIOUS"

Of course, Prof. Herbert T. Taylor of Worcester College should never have been so ingenious as to write an editorial in the "annual magazine. Col- leges should be adventurous and original and give up the old methods and innovations. They never should be afraid to open their minds to new ideas. They should be progressive in every way.

The "let's be ingenious" has a good year ahead for the measurement of oversights as well as the quality of things. If they are interested in football they choose an outstanding football and pedestal institution of which this is not true to its trust.

This thing is as good as a year ahead for the measurement of oversights as well as the quality of things. If they are interested in football they choose an outstanding football, and graduating classes will be found themself committed by rituals with a more harmonious attitude toward football.

The depression, with its consequent high cost of food, has caused many of them about their money, but in the market for football talent and they's energies toward more attractive schedule-making calls for the purposes of saving their athletic treasuries from being haunted.

The college which could students primarily in play football, and when they stop making too little work as a necessary evil, it is. President A. B. Weir says, belong to the Boston Herald.

Oliver procuring Cotton

Turkish Five Year Textile Industry Plan

Class Prattle

I don't know whether it was the Olivers or the Cottons who first introduced the cotton industry to Turkey. However, it seems that the Olivers have been most successful in procuring Cottons for their country. The Turkish government has decided to re-establish the textile industry in Turkey. The government has allocated a large sum of money to this purpose. The industry will be modernised and expanded. The government has also decided to provide a number of incentives to attract foreign investment in the industry. The Turkish government hopes that this will help to create new jobs and improve the country's economy.

Turkey's Five Year Textile Industry Plan

(Continued from page 1)

The first phase of the plan will involve the establishment of new factories and the modernisation of existing ones. The second phase will focus on the expansion of existing facilities and the introduction of new technologies. The third phase will be concerned with the development of new markets and the creation of new products.

The plan is expected to create thousands of new jobs and generate billions of dollars in exports. The Turkish government is confident that this will help to lift the country out of poverty.

Woolens and Worsted

Peri-tek Factory — About 15,000 metres of woolen cloth, as well as knitted wear, from partly-imported yarns.

The Hunka Factory — About 15,000 metres of woolen cloth, as well as knitted wear, from partly-imported yarns.

The Kukai Factory — About 15,000 metres of woolen cloth, as well as knitted wear, from partly-imported yarns.

The Yuki Factory — About 15,000 metres of woolen cloth, as well as knitted wear, from partly-imported yarns.

The Usak Factory — About 15,000 metres of woolen cloth, as well as knitted wear, from partly-imported yarns.

The Kurnaz Factory — About 15,000 metres of woolen cloth, as well as knitted wear, from partly-imported yarns.

The National Factory (Adana) — About 15,000 metres of woolen cloth, as well as knitted wear, from partly-imported yarns.

Carpets and Silks

The Ushak, Kayseri, and Kayseri factories have reduced their output owing to the lack of demand abroad for Turkish carpets.

Seven new silk weaving factories were established in 1935, bringing the number up to 24. Six new silk thread factories were established in the course of 1933, bringing the number up to 15.
