Lowell Textile Team Defeats M.I.T.

LOWELL, MASS., JANUARY 19, 1936

Number 8

Lowell Sunnys Wild in 4:31 Victory.

Lowell scored 32 points for the White Team on Friday evening, January 19, jumping to the forefront of New England college hoop sources with Power Play, T. C. and M. T., but could not hold the advantage over the Engineers in the van, 26 to 22, Lowell took matters with the loss, but Capt. Billy Gart of Tech again put his team in the lead.

At this juncture Elly Wu, who had led the Lowell scoring to three points in the second half, was injured and forced to withdraw and the representing Lowell Textile Institute team took a lead which they never relinquished.

Why Henry New Builds a V-8
As told by one of the survivors.

In view of the gracious offer of the American Motors Corporation of the city of Boston to the Lowell Textile Institute. We are told that the grand round for home at the beginning of the game was twenty-four. Twenty-eight miles on a gallon of gasoline, it was necessary to stop for gas immediately. The tank was conveniently placed under the front seat, making it a simple and efficient procedure to fill it. The pilot and copilot dangled, removed several bags andsuitcases from the trunk and checked out the seat cushion, screwed up the gas, and the gas was put in. This simple ritual was repeated in reverse order and we were on our way again. Truly this arrangement smacks of engineering genius; we shall doubtless pursue it as far as we can on the next trip.

We had a bit of trouble with the thermostat, a complicated heating system, and decided to put on the side curtains. This was accomplished on page 3.

A First Impression of Scotland

A Day in Edinburgh

By H. KENDAL DICK.

I SPENT only one day in Edinburgh and although I should like to stay longer, it was enough to convince me that there can be few places in Europe and America to compare to it.

We arrived in Edinburgh at Waverley Station. After an uneventful crossing by 250 miles, of which 13 were miles with snow—and emerged once Princes Street. Princes Street was, until 1839, restricted to private residences, but the acquisition of offices established gradually crowded out the beautiful town. New all down the north side, and spread throughout the city, the town, and hotels in the city. The architecture has been carefully watched, and no building, unattractively or of harmony with its surroundings may be erected. As a result of this preservation, Princes Street presents more real beauty and attractiveness than any other street in Scotland.

On Calton Hill, which rises above Princes Street, on the east, in what is sometimes known as "Scotland's Pride." This picturesque scene, overlooking the city of Edinburgh. The buildings are arranged symmetrically, and the whole effect is one of grandeur.

Newall and Munday, Messrs. Elmy for acting as clapperboys.

Textile Rifle Team Loses Match to N. H. University

Lowell Textile rifle team went to New Hampshire State University at Durham on Friday, Jan. 19, and lost a close match to the Hope College team. Fuller and Nelson were used for both teams. The match was held on the fair weather field of the university.

FRESHMAN XMAS DANCE

Well Attended

On Wednesday, December 15, 1935, the Class of 1938 held a Christmas Dance at Scottish Hall.

There was some uncertainty early in the evening as to whether or not it would be held, due to the efforts of the Sophomore Class to prevent it. As events turned out, however, the dance was well attended both by freshmen and upperclassmen, and the program for the evening was successfully carried through. This, the first class social of the year was chaperoned by several members of the Faculty and Field wires.

As it was the intent of the second.in "slightly" the class officers, one cop, a police watch was obtained, while the entire corps of janitors was on hand to prevent any possible contact between members of the two classes.
New Year's Resolutions

With the coming of a new year, it is customary to make an attempt to eliminate the evils and the weaknesses of the past, and to endeavor to improve ourselves—personally, and in our relations with other people with whom we come in contact. It is a worthwhile idea, whether or not the results produce any startling change. Although New Year's Resolutions are famous for their lack of sincerity, the realization of some of them is surely a step in the right direction. The diagnosis must precede the cure.

New Year's Day means that our school year is approximately half over. Surely it is a sobering thought to consider the opportunities of which we have neglected to make use in the past four months. Even more so is the realization of the futility of training to become a world's leader, especially for those of us who are finishing our last year at Textile, to be try to absorb every piece of information given to us between now and June, with a true appreciation of its possible worth in the future when such information will be vital to our success and much more difficult to procure than it is now.

New Year's Renovation

Speaking of new year renovations, would it be a good idea to start 1938 with a clean slate and as "Lowell Textile Institute?" We refer, of course, to the institution on the front of Southwick Hall which labels our Alma Mater "Lowell Textile School." The correction would certainly come under the head of improvements. If we take any pride at all in the fact that our institution is privileged to grant degrees, we certainly keep it a secret from the General Observer. Since it is an Institute, we cannot feel that we would be bringing harm to the institution by suggesting such a change.

Of course, we realize that Textile was only a school before 1929. In other words, only eight short years have passed since Textile became an Institute, and perhaps we are asking for too much when we wonder why the correction has not been made in that brief time.

Serious thought is, there any real reason why the change cannot be made? The expense involved would not be prohibitive. The trouble involved would not be prohibitive. The problem involved would not be prohibitive. The thought involved would not be prohibitive. The immediate involved would not be prohibitive. The expense involved would not be prohibitive.

LOWELL TEXTILE INSTITUTE

Four-Year Degree Courses in

CHEMISTRY AND TEXTILE COLORING—TEXTILE ENGINEERING Degrees of B.E.C. (Bachelor of Textile Chemistry) and B.T. (Bachelor of Textile Engineering) offered for completion of prescribed four-year course.

Three-Year Diploma Courses in

COTTON MANUFACTURING, WOOL MANUFACTURING, TEXTILE DESIGNING

Scientific and practical training in all processes of textile manufacture including all commercial phases.

Candidate must be graduates of High Schools and Academies admitted without examination.

For catalog address Charles H. Evans, 817, President, Lowell, Mass.

Something to Think About

This article is intended to present for careful consideration a number of facts and problems that are vitally connected with the Lowell Institute. It is offered in the light of constructive criticism and in the hope of the author that any disagreement with any of its principles will be passed on in written form to the Text where it will be published on competent analysis.

ATHLETICS

Due to an extremely rigorous course of studies at the Institute very little opportunity is available for athletics, and this develops into a multitude of sore spots and entanglements. There being only one "gun," it is impossible for any student group to occupy the gym at the same time. The only other available is during the free hour or at lunch time and as these times are occupied very largely by necessary conferences or the like, one is left with any possibility of having any practice. Now the solution is not in somehow or other developing a new gym but in possibly arranging the spare hours so that the students who are not on varsity teams would occasionally have a chance to spend a few moments in the gym.

It is apparent that this year the caliber of those who represent L.T.I. in the field of sports is somewhat improved; however there should be a continued improvement. Lowell Textile has a fundamental purpose of imparting educational training, and athletics it is but a part of the educational training. In the future have good athletes and still are good athletes who could combine educational and athletic talent, but there have been fellows at the Institute who know no equals in the field of education and have the mental and academic capabilities of a seven-year-old; Scarsanz; but the truth is now that we are not on the way to the highest plane of excellence. For students, after all, mean more than high scores because the sporting hero of today very often is the millionth of a later year; the "has" are fade and their glory is boasted in the history of this planet. All the more important, then, that we render our assistance today.

Idleness

Charles Dickens was expressing a sincere conviction when he said: "My imagination was altogether carried away by my concern for the future of the human race, and I have been long since driven by a sense of my own life's end to exert myself in the direction of character building.

In the world of such a public, we will be required of the intensity for irresolute, for not, and for the most part of the dreamers have in mind when we are not of the система of Life, and Universal Drepanio.

They think that such a thought, good, somehow, a scheme will be devised by which we will be able to stop until 6:00 on the morning of the day before our own.

The idea is that during the remainder of the week we will find some game and in front of the fire.

Forget it!

It would exterminate such a race of bears in less than one generation.

1937 Column

In the last TEST, it was stated that the "Class of 1937, due to the trial, no difference between the Engineers and the Students, "I am not stupid, facing a serious crisis," from the point of view of the other Engineers and the Students, the above statement is a mere fancy, a mere fancy, a mere fancy, a mere fancy.

To the point of view of the other Engineers and the Students, all of the others.Engineers, were not notified by the "I am not stupid, facing a serious crisis," from the point of view of the other Engineers and the Students, the above statement is a mere fancy, a mere fancy, a mere fancy, a mere fancy.

Now a hundred times, NO!

As soon as the Engineers got down from the trees of 1937, the Engineers will be too willing to cooperate with the Engineers for the benefit of Our Class.

**Why Henry Now? Builds a V-8**

(Continued from page 1)

The V-8 engine was designed by Mr. Henry Ford in 1932, and it was first used in the Ford Model A in 1932. The engine was designed to be more powerful and efficient than the four-cylinder engine used in the Model T. It was also lighter and more compact, which made it easier to package in the car.

**Conclusion**

In summarizing the remarks:

Some effort should be made to introduce intramural competition.

The alumni should be a body concerned more with the Institute that gave them the benefits of its staff and curricula.

Publicity should be carried out to a dignified manner and let the world in general appreciate the work of L. T. I. to offer.

Student surroundings should be improved so far as possible, but do not advocate pasted decorations similar to the Bedford House of Commons. It would be better to devote such material a little more interest in the surroundings at L. T. I. would be well appreciated by the students and the faculty.

The entire college concerted effort will also go a long way in advancing L. T. I.

**Faculty Row**

This Student Faculty basketball team in proving to be a great financial aid to the A. A. The J. V. I. drew the crowd and the game proved to be a treat. The next game is scheduled for next week against a local high school.

**Omircon Pi News**

Next that initiation is all over some of the members are thinking of starting another fraternity for not doing their studying. That will be a tough job for them.

- **Invisible Wright** was actually caught dancing with another girl at the pledge party.

- **Professor Cleo Reed** warned us that he didn’t have any money. Accordingly, when he was presented with the $10 bill and the ten dollar bill he couldn’t take the check, but he would gladly accept the money.

- **Bobby** had some position in the kitchen.

After we were somehow changed the price and with two hands of the V-8 engine, it was advertised for the benefit of all the students. We are going to have the engine on the road and the window to our mobile vehicles, we were of a group.

- **Bob** left us, for he saw no more on the road when the windshield wiper mysteriously disappeared. As it was not coming to the distance, we didn’t worry much about it, and traveled on our way.

A First Impression of Scotland

(Continued from page 1)

The examinations. I year rather with them, bizarre students, or restricted to a term, depended on exams. At times during the sessions were given an hour interval, after which students were confined until noon. Classes met again at one o'clock and continued its session until four. Another interval was given; then at six o'clock the students returned for two hours of examinations. States were restricted for the rest part, in Latin, Greek, and Physics.

Edinburgh University has always had an excellent effect on the students, and culture of the city. Its students, many of them, have attracted widespread fame. Later, at one time attended classes there, and many noted scientists have been graduated from its medical school. It is today one of the foremost institutions of higher learning in a country which is noted for its high ideals in education.

The Slide Rule

Checmists have a rule that slides, Multiples, subtractions, division, Add, and squares, and finds the logs, Cubes, and fourths, and clears the fog from a problem quite subtle. If you make the proper use of this instrument complex. Even though your brain its wickets. To the night you slide the stick, Till you hear a little click, Next you look into a glass, Watch the figures as they pass, Count them as they go and come Till you have a working sum Now you think your work is done, Heaven, no, it's just begun Slide and slide, just slide along You will never know you're wrong Even if you learn by heart How to slide the rule apart After we the task have viewed We are ready to conclude For this rule the simplest plain Is inside its leather case.

—Lyman C. Newell

How about a New Year's Resolution of refusing from those last year's regrets, etc., about the excesses of the last year of 1936, especially when we spent half of 1935 fighting to have it cut there.

Pamela, the person who "borrowed" the four consecutive copies of the picture from the library is in a competitive mood, would not it be a good idea for you to return them to the library.
