Ten Young Women Comprise Lowell Tech Angel Flight

The first unit of the nationally recognized Angel Flight, honorary service organization, announced that ten students of leading colleges and universities across the country, was airborne this week at Lowell Technological Institute. Ten young women comprise this latest auxiliary sponsored by the Arnold Air Society, a selective Air Force ROTC cadet organization which is named in honor of the late General William F. Arnold, first Air Force Chief of Staff.

Recognized by the United States Air Force, the private organization benefits from major support by the Air Force Association through Arnold Air Society sponsorship. It exists to provide the public with an understanding of the interest of cadets in the Air Force ROTC program. By that accomplishment, the Angel Flight activity is recognized as one of the Arnold Air Society, the community and the respective member colleges and universities.

The ten young women now in Angel Flight formation are awaiting only acquisition of uniforms to launch their official duties as adjoin to the ROTC activities on campus include:

Mary L. Wiggin, Class of '68 and new president of the organization. The daughter of Mr. and Mrs. Robert H. Wiggin of 790 Andover Road in Billerica, she also is a member of Phi Sigma Rho sorority and is majoring in plastics technology.

Judith A. Geoffroy, daughter of Mr. and Mrs. Joseph A. Geoffroy of 669 Wightman Street in North Chelmsford, is a member of the freshman class. The son of Mr. and Mrs. James A. Geoffroy, he is attending the freshman orientation course.

Linda R. Massa, 89, is the daughter of Mr. and Mrs. Guy T. Massa of 142 Shaw Street, known for his physics courses and Yvonne J. Poitras, the daughters of Mr. and Mrs. Frank J. Poitras of 5 Decatur Street in Billerica, is also a member of the Class of '69. Her field of concentration is chemistry; and Paula J. Laronche, a physics major, is also a member of the Class of '69. Her field of specialization is chemistry; and Paula J. Laronche, a physics major, is also a member of her Class of '69. Her field of specialization is chemistry; and Paula J. Laronche, a physics major, is also a member of her Class of '69. Her field of specialization is chemistry; and Paula J. Laronche, a physics major, is also a member of the Class of '69. Her field of specialization is chemistry; and Paula J. Laronche, a physics major, is also a member of the Class of '69. Her field of specialization is chemistry; and Paula J. Laronche, a physics major, is also a member of the Class of '69. Her field of specialization is chemistry; and Paula J. Laronche, a physics major, is also a member of the Class of '69. Her field of specialization is chemistry; and Paula J. Laronche, a physics major, is also a member of the Class of '69. Her field of specialization is chemistry; and Paula J. Her field of specialization is chemistry; and Paula J. Laronche, a physics major, is also a member of the Class of '69.
THE READING PERIOD, A HELP OR A HINDERANCE

Across the country there are many colleges and universities which have, what is known as, Reading Periods. The Reading Period usually is about one week long, and occurs immediately before finals. During this time no classes are held, but professors are available for help if the student desires it.

The theory behind this procedure is that the student will put this free time to good use by studying for finals. It is also assumed that the student is mature enough to seek help when he runs into problems which he is unable to solve.

It is almost certain that the students here at Tech would want a Reading Period. It is one of the one mentioned. Most of them would put this time to good use. But there would always be the ones who would not be able to assume the responsibility, which goes along with the privilege of having a Reading Period, thereby causing many of these students to do poorly on the exams. For this reason we feel that a Reading Period at Tech would not work.

Although the Reading Period, we do have an idea which we feel would work. Throughout the normal school year attendance of most classes is required. We feel that during the week before finals attendance should be optional. Also classes should not be run in the normal way but he question and answer period where a student could get the information he needs and then get up and go wherever he wishes to go.

This system would probably work well mainly because the student would go to class if he wanted help, could leave the class when he had obtained the information he needed and finally if he didn't need or want help he wouldn't go to class and waste his time, the professor's time or the class time.

HBF

SUMMER JOBS AVAILABLE IN EUROPE

Grand Duchy of Luxembourg—The American Student Information Service reports that the Grand Duchy of Luxembourg is still accepting applications from U.S. college students who wish to work in Europe this summer. The ASIS can provide students in temporary summer work in Great Britain, France, Germany, Switzerland, Spain, Sweden, Finland, Norway, Luxembourg, Belgium, Holland, Austria, Israel and Liechtenstein.

30,000 Openings

ASIS 20,000 job openings in countries which include resort hotels, office offices, factory work, hospital work, child care work, public school and private school teaching, camp counseling work, wages range to $5.00 a month for the high school graduates to $8.00 to $10.00 a week for the college graduates and board and board are provided free but if the student worker lives independently in the city in which he is working. In any case living accommodations are prearranged.

Orientation in Europe

Every student placed in a summer job in Europe attends a 3-day orientation in Brussels. After the orientation, the student is taken to the city where he is to work and is shown the city and its surroundings. He is taken to the actual place he is going to work at and where he will be living and he is shown the city in which he is working. In any case living accommodations are prearranged.

In the orientation, the student is given all the necessary information about living and traveling in Europe.

Travel Costs To $1,000

The ASIS also offers travel grants that greatly reduce the cost of the trip to Europe. Each student receives an individual travel grant depending upon individual circumstances. Student applicants are also eligible for work during the travel as the only way to pay for the costs of traveling to Europe. ASIS expects that a great many students participating in this program will want to save some money for the cost of the travel, and will want a summer job in Europe.

How to Apply

The ASIS summer job program in Europe is to provide every college student with the opportunity to use Europe to increase his cultural knowledge through travel and at the same time to earn and save money. Students with limited budgets would never be able to travel to Europe, and the ASIS knows that this golden opportunity to acquire a speaking knowledge of a foreign language is being lost.

Students interested in summer work in Europe should write to:

V American Student Information Service, 22 Avenue de la Liberté, Luxembourg City, Grand Duchy of Luxembourg, for the ASIS brochure which includes a comprehensive and description, with photographs, of jobs available and job and travel grant applications. Send in for the booklet, overview handling and air mail postage.

WOODY SPEAKS OUT

Now that the election campaigns are over and the advertising of weekly dazes has subsided, it is refreshing to walk down the halls of Tech and see the ugly wallpaper of posters on the wall. For the first time this semester the school corridors do not look like the center of a campaign with much of the color and excitement that was promised—only a dismal sight. Not only have the posters disappeared, but even more the number of people who are hanging around the halls. The students have a school spirit and pride, took it upon themselves to scrape the leftover tape and paper off the halls and to wash the walls of the larger locker room. Now the Institute's interior looks at least presentable and some steps should be taken to keep it this way.

First off, all the student body might take some pride in their school's appearance and refrain from doing their home work on the walls or in the halls. They might also consider how the walls are able to stand by themselves and do not need the extra support of a student's foot propped up against it. This is something easy and one of us can do.

But what can be done about the posters and flyers that will soon be once again, plastered all over the school? Many think that to run a successful dance or to achieve election they need only to run 100,000 copies of the fan flyers on the student mimeograph machine and spread these over every crack, crevice and bare spot in the school. When this is done the school isn't nearly looks like a pigeon and the school's appearance is appealing to anyone with a little taste and discernment. This is something easy and one of us can do.

What can be done and what should be done to designate certain areas for posting advertisements and forbid any posters in other sections of the school. The use of a certain area or candidacy may do so through the student mailboxes, through flyers, whatever through the bulletin board or through a certain section of the school for a little month. The Student Council is certainly considering a proposal and would do well to bring such a situation about.

OPERATION CLEAN-UP

by Jack Cronbe

Notice anything different about the Institute? As you walk through the halls there is something missing, but you just can't put your finger on it. If you've been sensing this but wouldn't admit to it because the halls have lost the convivial attitude that they have in the past, you're right. For the school has taken on a cleaner look. What is causing this? In the old times the halls were filled withFajer, posters, cartoons, and posters and the witticisms, formular, and other scribbling on the main bulletin board.

One Saturday last month, several Cirlc K members gave up a few extra hours after evening services, school with sparky and brushes. They stretched high and looped how to remove tape and flys and put them in operation, doing a job of cleaning the halls. What a waste, considering how much time, effort and money will be saved next year! And with Ajax and a lot of elbow grease, the walls are even cleaner.

The janitors, overworked as all the others, can be following around every organization, offering service, and they are not allowed to clean up after them. When you take down your posters and flyers, does it take that much extra effort to throw in the janitorial supplies? If a few of these who are organizing a candidate's campaign who are posted in the school hall, why don't they be responsible and clean up after them? The trucks can be washed with this steps that are taken. We've already done the job of cleaning the halls and the janitors are not paid or even expected to do the job. We don't want to take the trouble and expense of cleaning up after them. They should be responsible for the maintenance of the halls. They air is clean, the walls are clean, and they have cut the cleaning time of the janitors for an extra week! And with Ajax and a lot of elbow grease, the halls are cleaner than they have been in years! And with Ajax and a lot of elbow grease, the halls are cleaner than they have been in years!

A prime example of the cloak of secrecy was the proposal by Roger D. Babbidge, who wrote a document entitled "A Federal Education Agency for the Future," which purportedly started away when Members of Congress began to look askance. The document was subsequently announced that it was unexpectedly issued as a public document and was not meant to be.

If the proposals it embraces are, in fact, part of the formation of long-range policy in the U.S. Office of Education, then it should have been a public document.

It raises the question as to why it was whisked into obscurity at the point of congressional concern.

For years, those who favored Federal aid to education have charged that opponents, who feared Federal mandates, were creating a strawman or a bogeyman.

Well, these who persist in this attitude, in the light of the recent exposure of the educational personally tests and traits of the long-range plans being made, under the guise of a national assessment of our educational system, must think that everyone else is intellectually blind or just plain naive.

Whether you are a proponent or opponent of Federal aid to education is not the main issue.

It is interesting to note that school officials in Los Angeles, New York, Chicago, Baltimore, Columbus, Boston, Californi,

and Illinois have told the U.S. Office of Education that the examinations which are mandatory to participate in the personality test program devised by the Federal Office of Education, Chicago and Indiana schools are reported to be reluctant, although they have not expressed any final decision.

It is also interesting to read in the press that the Community Relations Service, created by the Civil Rights Act of 1964, has been given the task of preventing any Federal courts' action. It seems that the press has not the time to keep up with you, but if you are not, if you should be, it might save your eyes.

Administering the self-appointed personality tests, protocols for the U.S. Office of Education deal in semantics with regard to the language and intent of the Civil Rights Act of 1964 and in the legislation which seeks a Federal step-up in what there has traditionally been the free education system in this country, Congress has a responsibility to spell out in its legislation the language of funds provided for education in keeping with what is, in the feelings of most of the American people, and particul-

arly the parents of school children in this generation as well as the generations yet to come.

I commend the Government Operations Subcommittee for investigating the testing program of the Office of Education and I am firmly of the opinion that the Subcommittees on General Education and Special Education should also conduct hearings, in order to go into all aspects of this program. Congress should be in a position to hold a tighter rein on Federal activities and place clearly upon the record the stand and plans, in the public interest.

And we had better understand that what we are doing when we be-

come a party to having Federal officials, who are not subject to the decision of the public, establish-

**SPECIALIZED SUMMER JOBS AVAILABLE THROUGH PLACEMENT OFFICE**

A series of summer jobs offering high pay and related field positions to students for both undergraduate and graduate levels, is presently available through the office of the Placement Director, MCDONNELL.

At this time a paper manufacturing company is interested in hiring a chemical solvency engineer. Also coming up during the summer are the positions of chemical library assistant, quality control engineer, and high school chemistry teacher. A local New Jersey company is looking for researchers in the area of chemistry.

Interested students, qualified for these positions, are urged to consult Mr. Her-rihan, the Placement Director, as soon as possible. He is interested in receiving your applications and enthusiastic Lowell Tech stu-

dents are urged to look for valuable temporary jobs.

**Mr. SALVATORE Motta FROM THE AVCO CORP. SAYS TO A.S.M.E.**

By William H. Cole

Mr. Motta, A.S.M.E., spoke to the T.T.T. Student Sec-

tion, the morning of the second evening meeting Thursday, December 11, at the AVCO Corp., and is a Design Specialist for educ-

ation at the Advanced Institute of Chemical Technology, Uni-

city of the City of New York.

In his work at AVCO Corp., he has recently been involved in the development of a new type of expandable aluminum structure for the heavy transport sector. He has also discussed plastic, and metal, Smaller glasses and films also showed thin films in various stages of development. Applications were made in such areas as space antennas, and piet lenses for field soldiers.

DRAFT-EVASION ATTEMPT FLOPS

(ACP)-Efforts to provide a draft evasion alternative have been "a complete flop," according to the director of the Selective Service System.

Fred Lewis H. Stempel, who heads the Selective Service System, said he is not discouraged by draft-dodging dissimulation and their possible effect on his ability to meet the manpower needs of the armed forces, reject theBrown and Weinko. Located University.

"My real concern," Stempel said, "is that some local boards react as if this inflation by nominating student deferments. Of the two million college students continuing their education under student deferments, only a small fraction of one per cent have been involved in significant activities. The entire 200,000 cards or other documents on individuals serve in the armed forces," the official stated.

Stempel added that the efforts of these draft dodgers were "a complete flop." If they did not embark on serious programs to avoid service, they would not be able to do so.

"We also are more effective in working to convince these young people," the official said.

Our high school diplomas are now widely accepted of service," Stempel said.

Chamber of Commerce warns Administration to take care in spending

Washington, D.C.: The administrative branch and the Congress are to exercise caution in the spending of the nation's resources. The Chamber of Commerce of the United States has recommended that no increase in the budget be made.

The increase in spending authority was 3.5 billion. According to the Chamber of Commerce of the United States, if the increase continues at this rate, it will result in a deficit of more than $2 billion annually.

This is twice the amount of this year's budget of $1.7 billion. The increase is the result of the federal government's tax increase since the Revolution to the

Our representatives are coming to the campus to talk to you about careers with Phillips. We're looking for highly qualified young people from practically all of the engineering disciplines, as well as physical scientists. Some of our active programs include: research and development, computer programming, operations research, technical sales, and market development.

Phillips is a widely diversified company, an interesting company, and a personal, people-type company. If any of the above areas are of interest to you, make a date with us at your campus placement office. They have more information on our job opportunities. We'd like to have a dialogue about us and you.

FRATERNITY NEWS

PI LAN NEWS
Before long we will be starting a new semester and with it will begin a new year of college life. Many of us are looking forward to a new semester full of opportunities, challenges, and adventures. We hope to leave college with a bright future. This is our second to last semester, so let us enjoy the time we have left.

Congratulations go to Wiley D. for getting posted. I have been on his case for the past year, ever since Wiley went into the house of the Fox and the Swim-Swim Award. (I don’t know who he is.) Wiley has the fine distinction of the Campus of getting lost while flying during vacations. I have his friend, the late G. C. Johnson. Wiley’s dad is a true Fox. He is also the only man who has made a personal appearance this semester.

The best man of the Fox was Billy Taylor. Billy Taylor is the last man to visit the house. Billy is a real Fox. He is also the only man who has made a personal appearance this semester.

During vacations a few alumni returned to visit the house. Gary Brooks, his wife and son returned and Gary’s son left a lasting impression on Kitty and the rest of the Fox. Gary’s mom, the late Ginny Johnson, is still the best man of the Fox.

The Pi Lan alumni have been busy again. The Red Hotter, the Pita, the Kappa, the Lambda, the Phi, and the Zeta, who have a great deal of fun and enjoyment, have a great time visiting and enjoying each other’s company.

DELTA KAPPA PHI
We hope that everyone has enjoyed the past vacation as well as the brothers of D. K. S. We have enjoyed playing games, drinking, and having a great time together. We are looking forward to the new semester and all the opportunities it brings.

Omicron Pi
Now that we have finished our studies for the vacation, we can settle back and enjoy the holidays. The Christmas party was a success with the brothers getting together for some great food and drinks. We had a wonderful time and it was a great way to end the semester.

MON. & TUES., JULY 8, 7, 8

Appointments should be made in advance through your College Placement Office.
ACADEMIC FREEDOM IN THE UNITED STATES: ACADEMIC OR PRACTICAL?

Across the fringes of the United States and from New Jersey to California, the real meaning of academic freedom is being determined by the campuses and AAU.

Critical grievances: the situation over to University of Colorado's Donman's main issue was his attack on his ...ly of the university. The protest had been ...dominated by faculty members who felt they were being victimized.

What is at stake in these battles in the raising of faculty and universities' rights. The protection of university freedom, the struggle against the submission of the university to external pressures, is a battle against any kind of censorship and against the submission of the university to external pressures.

**UPCOMING INCREASE IN SOCIAL SECURITY TAX**

The Treasury Department is about to unveil a new proposal for increasing the Social Security tax portion of Social Security contributions. If Congress approves the proposed increase, Social Security taxes could be doubled by 1970.

Under the law, the tax rate will rise periodically to a total of $2.50.

However, if history holds true, Congress will add more benefits to Social Security, and by the time the top tax be might be $6,500 a year.

The tax increase was enacted in the last session of Congress. The Social Security Administration has been working on a proposal to increase the tax,
Lowell Tech Scores 49 points in trouncing New England College. Previous high total was 45 points. Lowell Tech continued to dominate its opponents by continuous team effort, rolling its season record to 11-1. The defeat, a heartbreaker, came at the hands of undefeated and highly rated Haskell. According to recent releases N.A.A.C. rating, Lowell Tech is seventh in the nation in offense with an average of 102 points. The leader of the small school loop has an average of 100.7 points per game. Hank Brown is currently number one in the nation among the small college loop, with an average of 24.7. The Terriers have three remaining games this semester. They play Hartford, which may make this game, Nichols and Nathanski Hampshire College. It is hoped that all the varsity players will make it through the season, as there are some games in the second section.

After Lowell Tech beat State, the Terriers made it four in a row over Norwich College. Home 93 to 14. Hank Brown led Tech in the second section, 11 points. At Regis the Terriers scored 21 points, John Hay 19 and Steve Houde 11. All Regis points were scored in ten points. Tech is at Regis the final, Tech total 12 Home 93.

Watters 0 3 2

Two days after the Norwich game, Tech traveled to Worcester. Here, to meet the highly rated Clark University. Clark had been undefeated until this game in which the Terriers’ five starters all hit double figures. The final score was Lowell Tech 93, Clark 90. Lowell Tech seemed to be better rated than Clark as many of Tech’s floor players were in Worcester. Tech’s 23 points on the foul line compared to eight for Clark proved to be the game’s key. Steve Houde was 19, Al Byron 19, John Hay 14 and Ray Kydd 11, while Ed Bullock pulled down off boards 12 and Bullock 10. Tech led 54-47 at the close of the first half.

The Tech team averaged last year’s towering by beating Hartford 109-93. The Terriers have won over the Hawks since the beginning of the season between the two teams. Both teams were out from the floor with Tech leading 42-36 from the floor. The game was close throughout the entire contest with the lead changing hands several times. At one time, Tech was up 31 points but Hartford came back to tie it up and enjoyed an 11-point lead but Hartford came back to tie it up and enjoyed an 11-point lead. Then both teams shared the lead at different points which the Terriers pulled out in front 91-81. The final score, 113-98.

In our next contest following the Boston game, Tech played Harvard at the New Art Hall. It was a thrilling match that the Terriers had broken down, as the Terriers turned them 149 to 12. This game showed the Terriers’ scoring ability and determination. Powered by the Terriers’ team play, the Terriers showed everyone that they are winners in every sense of the word. The starting team of Al Byron, John Hay, Steve Houde, Ray Kydd and Ed Bullock and their bench, including Hank Brown and Don Gwin, played well for the second team, scoring 12 and 8 points respectively. Hank Brown pulled down 20 rebounds despite seeing limited service. New
